

CompanyCam

Machine Learning Engineer - Computer Vision

Austin, TX (Remote) • Remote Engineering Team

THE MISSION

Contractors capture millions of jobsite photos through CompanyCam every day. You'll turn that visual data into structured understanding—building systems for image classification, document detection, segmentation, and multimodal embeddings across 70,000+ daily projects.

WHAT YOU'LL DO

- **End-to-End Ownership:** Own the full ML pipeline: data preprocessing, training, evaluation, and deployment into sustainable inference services.
- **Architectural Impact:** Make high-level decisions on model architecture, latency, and cost characteristics.
- **On-Device & Multi-modal:** Solve problems involving segmentation, on-device model deployment, and vision-language model integration.
- **Automation:** Build automated, self-sustaining pipelines where models train and deploy with minimal intervention.
- **Discovery:** Conduct spikes to validate feasibility before committing to full development cycles.

CULTURE

Remote-first team spanning the U.S. We care about results and talent, not degrees. We produce work with meaningful outcomes and learn from our outputs. We value people who are good at what they do and are not jerks.

ANNUAL SALARY

\$220,000 - \$250,000
/ year

Salaried + Meaningful Equity + Benefits

CORE SKILLS

Computer Vision

Model Deployment

Image Segmentation

Vision-Language Models

Multimodal Embeddings

MLOps Infrastructure

Observability Tooling

EQUAL OPPORTUNITY

CompanyCam is committed to respect, inclusion, and growth. We consider all applicants regardless of personal traits. Potential and passion matter most.
