

Junior Data Engineer

 100% Remote (Must be based in Madrid, Spain)

ABOUT THE ROLE

Quantori is looking for a motivated **Junior Data Engineer** to assist in developing intelligent solutions for the life sciences and healthcare sectors. You will work within the Central European Time (CET) schedule to help our customers accelerate discovery and acquire clinical insights.

RESPONSIBILITIES

- Support the development and optimization of **data pipelines in Python**.
- Collaborate with senior engineers and data scientists on mapping definitions for transformation pipelines.
- Assist in unit testing and mapping function development.
- Configure and maintain quality control pipelines to ensure mapping accuracy.
- Document technical workflows and data mapping configurations.

WHAT WE EXPECT

- **0-2 years of experience** in Data Engineering or related software development.
- Practical knowledge of the **Databricks** platform.
- Ability to create and maintain robust **Python pipelines**.
- Foundational knowledge of Spark (PySpark) and SQL.
- **English Level: Minimum C1** (Accredited certification required).
- Strong analytical skills and eagerness to learn within the Life Sciences domain.

OUR OFFER

At Quantori, we invest in your growth from day one.

- **Paid Training:** Extensive in-house training program for juniors.
- **Certifications:** 100% company-paid certifications for **AWS, Databricks, and Snowflake**.
- **100% Remote:** Full flexibility while based in Madrid.
- Healthcare benefits and professional mentoring.
