

Meta

Data Engineer, Product Analytics

United States (Remote) • Full-time

Compensation: \$177,000 - \$247,000 / year

Includes Bonus + Equity + Benefits

About the Role

As a Data Engineer at Meta, you will shape the future of products across Facebook, Instagram, Messenger, WhatsApp, and Threads. You will design and build some of the world's most extensive data sets for over 3 billion users, collaborating with software engineering, data science, and product management teams.

Core Responsibilities

- **Data Architecture:** Conceptualize and own data architecture for large-scale projects, evaluating tradeoffs in operational costs and design.
- **Pipeline Development:** Solve challenging integration problems using optimal ETL patterns from structured and unstructured sources.
- **Data Modeling:** Design, build, and launch sophisticated data models and visualizations across different domains.
- **Strategy & Influence:** Use data to shape product development and identify new opportunities, acting as a strategic partner to cross-functional teams.
- **Security & Governance:** Implement security models based on privacy requirements and manage SLAs for all data sets.
- **Mentorship:** Support team members through actionable feedback and optimize frameworks to facilitate development.
